

# **YOUR SEPTIC SYSTEM. YOUR RESPONSIBILITY.**

Your septic system cleans the wastewater at your home. A failure could allow wastewater to seep onto the ground surface. This wastewater could then be transported to our creeks and rivers when it rains...the same creeks and rivers that supply our water for drinking and for recreational activities. Also, septic system repairs are very expensive.

## **Please Be Responsible.**

Have your tank inspected and pumped every three years by a licensed septic tank service contractor. Even better, if a public sanitary sewer hook-up is available, consider making that connection.

**Remember...*"Only Rain in the Drain"***
